1. An Examiner's Amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 C.F.R. § 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the Issue Fee.

2. Pursuant to MPEP 606.01, the title has been changed to read:

-- AN EMAIL SYSTEM RESTORING RECIPIENT IDENTIFIER BASED ON  
IDENTIFIER-FOR-DISCLOSURE FOR ESTABLISHING  
COMMUNICATION BETWEEN SENDER AND RECIPIENT --

3. The following is an Examiner's Statement of Reasons for Allowance:

Curry et al., Pub. No. 2003/0182559, teach a method and apparatus, such as a secure distribution server, receives encrypted information from a sender, wherein the encrypted information is for transmission to a plurality of intended recipients. In addition to the encrypted information, the method includes receiving an encrypted secret key that is encrypted using a public key associated with the secure distribution server. The method and apparatus decrypts the encrypted secret key to produce a decrypted secret key. The method and apparatus then obtains a public key associated with one or more delegates of the intended recipients, senders or other entity and encrypts the decrypted secret key with the corresponding public key of at least one delegate associated with the intended recipients or senders to produce at least one delegate-specific secure

secret key. The method and apparatus then forwards the received encrypted information sent by the sender and also sends at least one delegate-specific secure secret key to a corresponding delegate of the intended recipients or senders. McDonald et al., Pub. No. 2004/0022390, teach a method for secure exchange of data objects over a computer network. The method includes the steps of identification, authentication and authorization of an originating user, and determination of the originating user's credentials. Object and network cryptographic keys and materials are assigned to the originating user based on the originating user's credentials. A first level of encryption is performed on a data object using the object keys and materials assigned to the originating user, and a second level of encryption is performed on the data object using the network keys and materials assigned to the originating user. The data object is then sent over the computer network to a recipient user. If the recipient user has appropriate network keys, a first level of decryption is performed on the data object, and if the recipient user has appropriate object keys and materials, a second level of decryption is performed on the data object. The decrypted object may then be accessed by the recipient user. The prior art of record teaches the claimed invention substantially as discussed above, but it fails to teach or suggest individually or in combination that a system and method of performing a communication between a sender terminal and a recipient terminal in response to a communication request from the sender terminal using a recipient identifier for uniquely specifying a recipient, the system and method comprising: creating an identifier-for-disclosure based on communication condition information for informing communication conditions to a

Art Unit: 2454

recipient at a time of performing the communication and the recipient identifier; restoring, when a communication request from the sender terminal based on the identifier-for-disclosure created is received, the recipient identifier and the communication condition information from the identifier-for-disclosure; and establishing, when the communication conditions included in the communication condition information restored are satisfied, the communication between the sender terminal and the recipient terminal according to the communication request as set forth in claims 54-109. Claims 54-109 are allowed because of the combination of other limitations and the limitation listed above.

4. Examiner interprets the limitation "computer-readable recording medium" as a device that stores computer instructions and participates in providing the computer instructions to a computer processor for execution. The computer-readable recording medium includes non-volatile media, volatile media, computer storage devices and memories. For example, optical or magnetic disks, ROMs, PROMs, EPROMs, EEPROMs, RAM, hard disks, CDs, DVDs. The "computer-readable recording medium" does not include acoustic or electromagnetic waves, such as those generated during radio-wave, infra-red, and optical data communications.

5. Any comments considered necessary by applicant must be submitted no later than the payment of the Issue Fee and, to avoid processing delays, should preferably accompany the Issue Fee. Such submissions should be clearly labeled "Comments on

Statement of Reasons for Allowance."

6. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Le Luu whose telephone number is 571-272-3884. The examiner can normally be reached on 8:00am - 4:30pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Nathan Flynn can be reached on 571-272-3880. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
